

### Homework 6: Join

Use only a single SQL statement for each of the following questions

- 1** Give a listing of all the ssns, first names and the class descriptions of all the classes the students are taking. If there are no class \_descriptions display 'No description is available yet'. (USE NVL)

```
81 SELECT ssn, fname, nvl(class_description, 'no description is available yet')
82 FROM student NATURAL JOIN student_class NATURAL JOIN class;
83
```

SSN	FNAME	CLASS_DESCRIPTION
172-32-1176	Johnson	Database Programming
213-46-8915	Marjorie	Introduction to C programming
267-41-2394	Michael	Intro to principles
409-56-7008	Abraham	Database Programming
427-17-2319	Ann	Intro to principles
472-27-2349	Burt	Introduction to C programming
486-29-1786	Chastity	no description is available yet
527-72-3246	Morningstar	no description is available yet
648-92-1872	Reginald	no description is available yet
672-71-3249	Akiko	Introduction to Computers
712-45-1867	Innes	Database Programming
846-92-7186	Sheryl	Introduction to C programming

2	<p>Give a listing of only the lname and the class_code for students who are taking 'Introduction to C programming'. (Inner join)</p>								
	<pre> 87 SELECT lname, c.class_code 88 FROM student s, student_class sc, class c 89 WHERE s.ssn = sc.ssn AND sc.class_code = c.cl 90 class_description LIKE 'Introduction to C prog </pre> <table border="1"> <thead> <tr> <th>LNAME</th><th>CLASS_CODE</th></tr> </thead> <tbody> <tr> <td>Green</td><td>32</td></tr> <tr> <td>Gringlesby</td><td>32</td></tr> <tr> <td>Hunter</td><td>32</td></tr> </tbody> </table>	LNAME	CLASS_CODE	Green	32	Gringlesby	32	Hunter	32
LNAME	CLASS_CODE								
Green	32								
Gringlesby	32								
Hunter	32								
3	<p>Give a listing of all the class_descriptions and the number of students enrolled in each class for all students who are older than the average age where the total number of students for the class is more than 1 student. Order by the number of students. If there is no class description replace it with 'Other Classes' (Note: Take it in steps. First do all those who are older than the average age, then do the group by, then add the having clause and then the order and then combine everything together)</p>								
	<pre> 93 SELECT nvl(class_description, 'other classes'), COUNT(*) 94 FROM student s NATURAL JOIN student_class sc NATURAL JOIN class c 95 WHERE MONTHS_BETWEEN(sysdate, dob)/12 &gt; (SELECT AVG(MONTHS_BETWEEN(sysdate, dol 96 GROUP BY class_description 97 HAVING COUNT(*) &gt; 1 98 ORDER BY 2; </pre> <table border="1"> <thead> <tr> <th>NVL(CLASS_DESCRIPTION, 'OTHERCLASSES')</th><th>COUNT(*)</th></tr> </thead> <tbody> <tr> <td>Introduction to C programming</td><td>2</td></tr> <tr> <td>other classes</td><td>2</td></tr> <tr> <td>Database Programming</td><td>2</td></tr> </tbody> </table>	NVL(CLASS_DESCRIPTION, 'OTHERCLASSES')	COUNT(*)	Introduction to C programming	2	other classes	2	Database Programming	2
NVL(CLASS_DESCRIPTION, 'OTHERCLASSES')	COUNT(*)								
Introduction to C programming	2								
other classes	2								
Database Programming	2								

4	<p>Give a listing of all the classes for which no students are enrolled in (use in or not in clause) (subquery)</p> <pre> 102 SELECT class_description, class_code FROM class 103 WHERE class_code NOT IN (SELECT class_code FROM st </pre> <table> <tr> <th>CLASS_DESCRIPTION</th><th>CLASS_CODE</th></tr> <tr> <td>Operating systems</td><td>14A</td></tr> </table>	CLASS_DESCRIPTION	CLASS_CODE	Operating systems	14A		
CLASS_DESCRIPTION	CLASS_CODE						
Operating systems	14A						
5	<p>Give a listing of all the students who are not enrolled in any classes (Note: Use Exists or not Exists)</p> <pre> 107 SELECT ssn, fname FROM student s 108 WHERE NOT EXISTS (SELECT * FROM studen 109 WHERE s.ssn = sc.ssn); </pre> <table> <tr> <th>SSN</th><th>FNAME</th></tr> <tr> <td>238-95-7766</td><td>Cheryl</td></tr> <tr> <td>999-00-0000</td><td>Cal</td></tr> </table>	SSN	FNAME	238-95-7766	Cheryl	999-00-0000	Cal
SSN	FNAME						
238-95-7766	Cheryl						
999-00-0000	Cal						
6	<p>Create a new table that contains the list of all the students and class_descriptions. Include in this table the list of all students who are not enrolled in any classes (display no classes). If there are no class descriptions then display 'no description' (Use combination of inner join, union and minus) (Note: minus will deal with the students who are not enrolled in any classes)</p> <pre> 114 CREATE TABLE new_table AS 115 SELECT fname, lname, nvl(class_description, 'no description') cl 116 FROM student s INNER JOIN student_class sc ON s.ssn = sc.ssn 117 INNER JOIN class c ON sc.class_code = c.class_code 118 UNION 119 ( 120 SELECT fname, lname, 'no classes' FROM student 121 MINUS 122 SELECT fname, lname, 'no classes' FROM student_class sc INNE 123 ON s.ssn = sc.ssn 124 ) </pre>						

7	Repeat question 6 using a combination of inner join, union and not exists (Note: Not exists will deal with the students who are not enrolled in any classes)								
	<pre> 128 CREATE TABLE new_table AS 129 SELECT fname, lname, nvl(class_description, 'no description') c 130     FROM student s INNER JOIN student_class sc ON s.ssn = sc.ss 131     INNER JOIN class c ON sc.class_code = c.class_code 132 UNION 133 ( 134     SELECT fname, lname, 'no classes' FROM student s 135     WHERE NOT EXISTS (SELECT * FROM student_class sc 136     WHERE s.ssn = sc.ssn) 137 ) </pre>								
8	<b>Create a view.</b> We want to find out which courses are being taken by the different students for all those whose age is greater than the average age. Give a listing of the course descriptions and student names (Inner join)								
	<pre> 141 CREATE VIEW new_view AS 142 SELECT class_description, fname, lname FROM 143 student s INNER JOIN student_class sc ON s.ssn = 144 INNER JOIN class c ON sc.class_code = c.class_cc 145 WHERE (MONTHS_BETWEEN(sysdate, dob)/12) &gt; 146 (SELECT AVG(MONTHS_BETWEEN(sysdate, dob)/12) FRC </pre>								
9	We want to find out the courses that each student is not enrolled in. Give a listing of the course descriptions, and the students (lname) who are not taking that specific course (Use a cartesian product and union it with a minus)								
	<pre> 151 SELECT class_description, lname 152 FROM student CROSS JOIN class 153 MINUS 154 SELECT class_description, lname 155 FROM student NATURAL JOIN student_class NATURAL </pre> <table border="1"> <tbody> <tr> <td>Introduction to Computers</td><td>Locksley</td></tr> <tr> <td>Introduction to Computers</td><td>O'Leary</td></tr> <tr> <td>Introduction to Computers</td><td>White</td></tr> <tr> <td>Introduction to Computers</td><td>del Castillo</td></tr> </tbody> </table>	Introduction to Computers	Locksley	Introduction to Computers	O'Leary	Introduction to Computers	White	Introduction to Computers	del Castillo
Introduction to Computers	Locksley								
Introduction to Computers	O'Leary								
Introduction to Computers	White								
Introduction to Computers	del Castillo								

10	Use the system catalog tables to display the results to find out the following: (Note show me the SQL syntax along with your results) Only a single SQL statement for each question.						
a) Primary key name and the columns that make up the primary key for <b>student</b> table							
<pre>158 SELECT constraint_name, column_name 159 FROM user_constraints NATURAL JOIN all_co 160 WHERE table_name = 'STUDENT' 161 AND constraint_type = 'P';</pre> <table><thead><tr><th>CONSTRAINT_NAME</th><th>COLUMN_NAME</th></tr></thead><tbody><tr><td>STUDENT_PK</td><td>SSN</td></tr></tbody></table>		CONSTRAINT_NAME	COLUMN_NAME	STUDENT_PK	SSN		
CONSTRAINT_NAME	COLUMN_NAME						
STUDENT_PK	SSN						
b) Unique key name and the columns that make up the unique key for the <b>student</b> table							
<pre>165 SELECT constraint_name, column_name 166 FROM user_constraints NATURAL JOIN all_cc 167 WHERE table_name = 'STUDENT' 168 AND constraint_type = 'U';</pre> <table><thead><tr><th>CONSTRAINT_NAME</th><th>COLUMN_NAME</th></tr></thead><tbody><tr><td>STUDENT_UK</td><td>LNAME</td></tr><tr><td>STUDENT_UK</td><td>FNAME</td></tr></tbody></table>		CONSTRAINT_NAME	COLUMN_NAME	STUDENT_UK	LNAME	STUDENT_UK	FNAME
CONSTRAINT_NAME	COLUMN_NAME						
STUDENT_UK	LNAME						
STUDENT_UK	FNAME						
c) Foreign key name, the columns that make up the foreign key and the columns it references in the parent table for <b>student_class</b> table							
<pre>82 SELECT constraint_name, column_name, r_const 83 FROM user_constraints NATURAL JOIN all_cons_ 84 WHERE table_name = 'STUDENT_CLASS' 85 AND constraint type = 'R';</pre> <table><thead><tr><th>CONSTRAINT_NAME</th><th>COLUMN_NAME</th><th>R_CONSTRAINT_NAME</th></tr></thead><tbody></tbody></table>		CONSTRAINT_NAME	COLUMN_NAME	R_CONSTRAINT_NAME			
CONSTRAINT_NAME	COLUMN_NAME	R_CONSTRAINT_NAME					

d) Name of all the check constraints and their conditions for the **student** table

```
179 SELECT constraint_name, search_cor  
180 FROM user_constraints  
181 WHERE table_name = 'STUDENT'  
182 AND constraint_type = 'C';
```

CONSTRAINT_NAME	SEARCH_CONDITION
SYS_C0086737843	"SSN" IS NOT NULL
SYS_C0086737844	"LNAME" IS NOT NULL
SYS_C0086737845	"FNAME" IS NOT NULL
